

Real-Time Medicine Availability & Store Locator

Connecting patients to the right pharmacy, instantly.

Team: Sourabh Chhabra, Madhav Gupta, Arpit Yadav

Why This Matters

When patients can access the medicines they need quickly and confidently, healthcare becomes safer, faster, and more humane.

Better Health Outcomes

Timely access to medicine helps patients recover sooner and reduces the risk of complications.

Fewer Delays in Care

Clear visibility into medicine availability can remove avoidable waiting, travel, and uncertainty.

Empowered Patients

Reliable information gives people the confidence to make faster, better decisions about their care.

Support for Vulnerable Groups

Elderly and critically ill patients benefit most when access is simple, immediate, and dependable.

Our goal is simple: create a healthcare experience where finding medicine is no longer a barrier to treatment, but a bridge to healing.

The Problem: Finding Medicine Takes Too Long

Not Every Pharmacy Stocks Every Medicine

Many medicines are available only at select stores—not every pharmacy stocks every medicine.

Store-to-Store Roaming

Patients often roam from store to store to find required medicines, delaying treatment and worsening their condition, especially in urgent cases.

Unexpected Stockouts

Even common, everyday medicines sometimes go out of stock unexpectedly.

No Way to Check Ahead

No simple way exists to check medicine availability across nearby stores before stepping out.

Introducing MedFinder

Instant Search

A web application that helps users instantly find which nearby recognized medical stores have a specific medicine in stock.

Real-Time Data

Instead of physically visiting or calling multiple pharmacies, users search a medicine and see real-time availability, price, and distance across listed stores.

Direct Connection

The platform connects patients directly to the right store, saving time during urgent medical needs.

How It Works

01

Live Inventory

MedFinder lists all recognized medical stores in a given location along with their live medicine inventory.

02

Smart Search

Users search for a medicine and filter results by nearby distance and lowest price.

03

Reserve Feature

Hold the medicine at a chosen store until arrival.

04

Verified Stores

Pharmacy registration ensures only recognized and authentic stores are listed.
